

Gentlemen, I am very much concerned over the (BPL) issue. As an avid amatuer radio operator (WD9BB) I have witnessed the demonstrations of this "very noisy" mode. This mode would all but destroy the amatuer spectrum of operations. Seems the burden of noise-free operations falls in the BPL lap, just as it has for decades in the lap of the amatuer. We have always fulfilled our part and hope that new hopefuls are forced to control theirs. This is harmful interference like none ever witnessed before. Please use tools you have never used before in correcting this matter. Thank You!
